Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election without traverse of claims 1, 2, 7, 12, 14, 19, and 25 in the reply filed on August 30, 2004 is acknowledged.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 2, 7, and 25 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent No. 6,340,367 B1 to Stinson et al. Regarding Claims 1 and 25, Stinson discloses an "endoprosthesis 16" for insertion into the human body having many crossed strands [Fig. 12; Column 14, lines 30-34]. He further discloses securing the intersection of strands (16) [see Fig. 13] with securing material (24). Securing material (24) has two sections (24a) and (24b) [see Fig. 14]. The segments (24a, 24b) are on opposite sides of the 180-degree bend in the middle of wire (24) [see Fig. 14]. The securing segments are joined together by the bend in the wire (they are the two ends of the wire). They are also joined because wire (24) is secured to crossed strands (16) [see Fig. 13].

3. Regarding Claim 2, Stinson discloses tying the securing material, which includes the material segments [Column 11, lines 22-28; Column 14, lines 44-45]. Only the "wrapping" embodiment is shown in the figures.
4. Regarding Claim 7, the securing material is radio opaque [Column 14, lines 48-52].

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 12, 14, and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,340,367 B1 to Stinson et al. in view of The Ashley Book of Knots by Clifford W. Ashley. Stinson discloses forming a knot at the intersection of two crossed strands, but fails to disclose what kind of knot to use. Ashley discloses thousands of knots used for different purposes. Specifically, Ashley teaches forming a "Lineman's Loop" on page 191 (included with Office Action). Such a knot is "strong, secure, and easily tied" (p. 191, line 8). Therefore, it would have been obvious to one having ordinary skill in the art of knots to secure the intersecting strands of Stinson's endoprosthesis with a Lineman's Loop, as taught by Ashley, in order to quickly form strong knots.
